

Continuously variable automatic transmission dedicated for hybrids

Efficient electrification with high performance

BOSCH
Invented for life

Powertrain systems and electrified mobility

The hybrid continuously variable transmission (DH-CVT) with a pushbelt from Bosch

high efficiency

Excellent fuel and energy consumption under all driving conditions

improved performance

Maximum speed up to 200km/h, great launch performance and hill-climbing power

- ▶ The hybrid continuously variable transmission offers a high level of performance, comfort and convenience. More agile vehicle dynamics ensure greater driving pleasure.
- ▶ The DH-CVT achieves optimized fuel consumption under all driving conditions. It enables fuel-saving functions like start/stop-coasting.
- ▶ The vehicle offers great launch performance and maximum hill-climbing power. It is possible to drive off smoothly even if the battery is empty.
